Real-Time SMS

Live GPS

Interactive Chat

The 4-Minute Response Gap

PROBLEM STATEMENT & BACKGROUND

Hospitality venues manage thousands of lives with fragmented, outdated emergency infrastructure.

Communication Silos

No unified channel connects guests, staff, and emergency coordinators simultaneously.

Critical Latency

Manual alert escalation adds 4-8 minutes to response times. 68% of incidents involve broken communication chains.

Zero Visibility

Dispatchers lack real-time data on the precise location of responders and distressed guests.

Unified Crisis Command

SOLUTION OVERVIEW

CrisisGuard is an end-to-end orchestration platform for mission-critical safety:

- **Distress Signal Tracking:** Guests in distress broadcast **live location** coordinates automatically.
- **Staff Lifecycle Management:** Staff can update incident status to **"Responding"** or **"Resolved"** in real-time.
- **Interactive Communication:** Two-way **staff-to-guest chat** for immediate reassurance and instructions.
- **Admin Broadcast:** Administrators can send facility-wide emergency broadcasts to all active users instantly.
- **Dispatcher Assignment:** Command center dispatchers can manually **assign specific staff** to active incidents.

Sub-Second Orchestration

TECHNICAL IMPLEMENTATION

Real-Time Stack

React 18+, Vite, and Socket.io for sub-second latency. Zustand for efficient global state management.

Omni-Channel Alerts

Twilio SMS Gateway sends automated notifications for all distress signals to ensure delivery if the app is closed.

Embedded Intelligence

sql.js (SQLite) for zero-dependency data logging and Geolocation API for sub-meter guest tracking.

Simulation Engine: Software-defined suite allows testing 6 emergency types with zero hardware CAPEX.

Disrupting Safety Tech

MARKET FEASIBILITY & IMPACT

Targets 700,000+ global properties with a high-margin SaaS model.

Starter	Pro	Enterprise
\$299/mo	\$899/mo	Custom

Impact Metrics:

- **95% Reduction** in alert escalation time.
- **Zero CAPEX:** No expensive hardware installation required.
- **Built-in Training:** Simulation engine reduces staff training costs by 40%.

The Road Ahead

FUTURE SCOPE & NEXT STEPS

PHASE 1 (Q3 2025): Full Twilio SMS/Voice deployment and multi-language support (EN, ES, FR, HI).

PHASE 2 (Q4 2025): React Native Mobile Apps and MQTT broker integration for physical IoT hardware.

PHASE 3 (Q1 2026): **Claude AI Triage** for automated severity classification and predictive incident detection.

CrisisGuard — Because every second counts.
